Temple Automation Software – DEVELOPMENT BRD (Version 1.0)

Prepared for: Development Team
Project Type: SaaS Temple Management Platform
Modules: Lite / Pro / Pro Max
Key Goal: Automate all temple operations including Poojas, Donations, Accounts & Devotee Management

1. System Overview

Temple Automation Software is a cloud-based platform designed to manage temple operations digitally. The system supports online bookings, donation tracking, daily pooja printing, festival management, staff handling, and automated reporting.

The product will be delivered in **three tiers**: Lite, Pro, and Pro Max.

2. Core Features & Deliverables

Below is the development breakdown of each module.

3. Module 1: Devotee Management

Functional Requirements:

- Ability to create, edit, update devotee profiles.
- Store name, phone, email, gothra, nakshatra, address, ID proof.
- Booking history and donation history.
- Search filter by name, phone, date, pooja type.
- Export list (PDF/Excel).

UI Requirements:

- Table with pagination, filters, edit/view action.
- Add/Edit form with validations.

Developer Notes:

- Store MasterData (Gothra, Nakshatra) in a lookup table.
- Use unique phone number for identification.

4. Module 2: Pooja & Ritual Management (MAIN MODULE)

Functional Requirements:

- CRUD for pooja types.
- Set pooja timings (multiple in a day).
- Assign priests to poojas.
- Track capacity (optional).
- Auto fetch online bookings & offline entries.
- Generate daily pooja list for printing.
- Festival-specific pooja creation.

Special Requirement: DAILY POOJA PRINT SYSTEM:

Functional Requirements:

- Pushpanjali
- Archana
- Abhishekam
- Usha Pooja
- Homam
- Special Festival Poojas

Print layout should include

- Devotee Name
- Gotra
- Nakshatra
- Contact number
- Pooja name
- Time slot
- Amount/Offering
- Notes to priest

Technical Requirements

- Auto-merge online + offline pooja entries
- Auto-sort by pooja time
- API endpoint: `/pooja/daily-print?date=DD-MM-YYYY`

5. Module 3: Online Pooja Booking

Functional Requirements

- Select Pooja → Select Date → Payment → Confirmation.
- Payment modes: UPI, Cards, Wallets.
- Generate auto receipt with QR.
- Booking should auto-sync to daily pooja print list.

- Refund management (admin only).

UI Requirements

- Clean booking flow (3 steps).
- Booking history page.

Developer Notes

- Integrate Razorpay/Paytm API.
- Create webhook for payment success.

6. Module 4: Donation Management

Functional Requirements

- Cash/UPI/Online donation entry.
- Donation categories.
- Auto receipt generation with QR.
- GST-enabled receipts (optional).
- Donor name display and recognition.
- Export monthly/annual donor report.

Technical Requirements

- Payment gateway integration.
- Auto reconciliation with accounts module.

---

7. Module 5: Hundi & Cash Collection

Purpose

Maintain transparency in hundi opening and cash handling.

Functional Requirements

- Record hundi opening events.
- Track team members present.
- Cash counting – denomination-wise entry.
- Attach photos/videos (optional).
- Auto-entry to accounts module.
- Secure audit log.

Developer Notes

- Use role-based access control for auditors.

---

8. Module 6: Festival & Event Management

Purpose

Handle festival bookings, passes & crowd control.

Functional Requirements

- Create festival events.
- Special pooja booking.
- Generate digital passes (QR).
- Stall/booth management.
- Crowd prediction using past data (Pro Max).

Output

- Festival day Pooja Master Print Sheet.

---

9. Module 7: Annadhanam & Prasad Distribution

Purpose

Manage food/prasad distribution and stock usage.

Functional Requirements

- Meal token generation (QR).
- Meal served counter logging.
- Ingredients stock consumption.
- Prasad stock tracking (laddu, vada, etc).

Developer Notes

- Simple forms + reports.

---

10. Module 8: Inventory Management

Functional Requirements

- Create item groups (Flowers, Oil, Ghee, Lamps).
- Purchase entry.
- Stock in/out records.
- Low stock alerts.

- Vendor management.

---

11. Module 9: Accounts & Finance

Functional Requirements

- Income/Expense entry.
- Hundi income auto-sync.
- Donation income auto-sync.
- Purchase bills upload.
- Ledger & categories.
- Monthly/Annual reports.

Developer Notes

- Use clear accounting structure.

---

12. Module 10: Staff & Volunteer

Functional Requirements

- Staff profile.
- Attendance (manual/biometric).
- Role-based system access.
- Duty scheduler.

---

13. Module 11: Dashboard

Functional Requirements

- Today’s poojas count.
- Total bookings.
- Today’s income.
- Inventory warnings.
- Upcoming festivals.

---

14. Module 12: Token/Queue Management *(Pro Max)*

Functional Requirements

- Token generation (print/SMS).
- Queue display on TV.

- QR verification at entry.
- Priority token support.

---

15. Module 13: Temple Website & Mobile App

Features

- Temple info + gallery
- Online booking
- Live darshan link
- Donation portal
- Event updates

---

16. User Roles & Permissions

Roles

- Super Admin
- Temple Admin
- Accountant
- Priest
- Counter Staff
- Volunteer
- Devotee

Access Control

- Each module must have explicit permission mapping.

---

17. Technical Stack

Recommended Tech

- **Frontend:** React / Next.js
- **Backend:** Node.js / NestJS
- **Database:** MySQL / PostgreSQL
- **Hosting:** Cloud-based (AWS / DigitalOcean)
- **Mobile App:** Flutter / React Native
- **PDF Generation:** Node-PDFKit or JSReport
- **Auth:** JWT / OAuth

---

18. Hosting & Deployment

Lite: Shared hosting

Pro: Standard cloud

Pro Max: Dedicated cloud + load balancing

---

19. Future Enhancements

- Multilingual app
- Voice-based pooja booking
- AI chatbot for temple FAQ
- Virtual darshan
- Temple marketplace
